

Name: Rahul Baser
Roll No: 75

Question: Implement the solution for sorting the array in which each element is defined as [a,b] for example [2,3].

Input: "1": Result: Sorted array: on value "a"

Input: "2": Result: Sorted array: on value "b"

Output:

```
[Running] cd "d:\Coding\RKNEC\Semester 5\DAA\" && javac Assignment1.java && java Assignment1
Array before sorting:

A      B
--      --
2      3
12     30
40     50
1      1
12     10
3      4

Array After sorting:

A      B
--      --
1      1
2      3
3      4
12     10
12     30
40     50

[Done] exited with code=0 in 0.925 seconds
```
